[00:32] 3 Bokep INDONESIA SMA SMP _FUNNY.Q: Is there a way to make stackdriver "backout" an app without restarting it So the answer is, YES. There is an interface that allows you to delete application revisions. However, this is not really documented and it works from my experience. So, to clarify I'm looking for documentation on this interface. Using our backend stackdriver versioning for containers (we have an "app revisions" panel that allows us to delete previous versions of our containers. However, when we delete one of the containers from the revision history panel, that container is deleted from our App Engine servers. We want to preserve the revision history for this container and are currently manually deleting the revisions in each application from the panel. A: You can create a new application revision in Stackdriver with new API call: `request.create_application_revision(app=app_id, version=app_version, optional_attributes=optional_attributes, optional_labels=optional_labels, optional_value=optional_value, optional_metadata=optional_metadata)` After that, you'll get a new app version number. Then, you can update existing stackdriver version with new API call: `request.update_app_version(app_version, optional_attributes=optional_attributes, optional_labels=optional_labels, optional_value=optional_value, optional_metadata=optional_metadata) ((- 3 * s 2d92ce491b`
