ODBC Data Source You can use an ODBC data source to get data from an Excel .xls or XLSX file. You must connect to the data source using the Microsoft Access Data driver. 1. On the **Connections** dialog box, in the **Data Sources** list, select **Access**. 2. Click **Connect**. 3. Select the type of database you want to use, and click **OK**. 4. In the **Data Source Configuration** dialog box, select the data source to use in your data flow. 5. In the **Name** box, enter the name for the data source. 6. In the **Connection String** box, enter the name of the ODBC data source. **Important**: The Microsoft Access Data driver uses the following syntax: `Provider=Microsoft.ACE.OLEDB.12.0;Data Source=@path\;Extended Properties=Excel 12.0;` 7. In the **Source Connection** box, select the connection you want to use. 8. Click **OK** to save the data source. 9. On the **Connections** dialog box, click **Add**. 10. On the **Connections** dialog box, select the **Microsoft Access Data** data source. 11. In the **Data Source Configuration** dialog box, select the data source to use in your data flow. 12. In the **Name** box, enter
