[^3]: More precisely, they assumed that the quark mass matrices are symmetric. We will discuss later the effect of breaking this assumption. [^4]: Of course, we can extend the definitions of λ and δ to the present case of $m_d = m_u$ and $m_u = 0$. However, these definitions are meaningless for $m_d = m_u$ and $m_u = 0$ unless λ and δ are non-negative. In this paper we do not treat such a degenerate case in which it is clear that one cannot draw any definite conclusion. [^5]: There can be many off-diagonal terms of mass square of the same order as the one in the neutrino mass matrix m_ν . But these terms are expected to be suppressed by the smallness of the fermion masses, namely the fermion masses are well described in the democratic mass matrix limit [^6]; [^6]: As we have discussed in [^7], one can find a set of degenerate values of λ and δ that simultaneously satisfy the relations (1)-(4).
