Thank you for downloading this free resource. Enjoy this sample and remember to rate it if you like it. Instructions for use: 1. Download Aliverb 7 and unzip it to your computer's default folder. 2. To use Aliverb 7, you need to set up its configuration file. After unzipping, you should see three files: aliverb.ini, aliverb7.ini, and a new folder named Installs. Open the Installs folder with your favorite text editor, for example, TextEdit (Mac) or notepad (Windows). Open the aliverb7.ini file inside. 3. Open the aliverb7.ini file with your favorite text editor, for example, TextEdit (Mac) or notepad (Windows). Add the following information into it. In the aliverb7.ini file, you will find the tab named "General" as follows: { VARIABLES |----> variables[0].type = "string" |----> variables[0].name = "reverb_space" |----> variables[0].description = "Name of the reverb space for this channel." |----> variables[1].type = "list" |----> variables[1].name = "reverb_layers" |----> variables[1].description = "List of reverb layers for this channel." |----> variables[2].type = "list" |----> variables[2].name = "midspace" |----> variables[2].description = "List of middle reverb spaces for this channel." |----> variables[3].type = "list" |----> variables[3].name = "reverb_sends" |----> variables[3].description = "List of reverb sends for this channel." |----> variables[4].type = "string" |----> variables[4].name = "file" |----> variables[4].description = "File for this channel." |----> variables[5].type = "string" |----> variables[5].name = "folder f3e1b3768c
