The present study was performed to elucidate the role of adrenergic-induced bronchospasm and bronchial hyperresponsiveness to specific allergens in the development of bronchial asthma. Adrenergic-induced bronchospasm (AIB) was induced in 19 asthmatic patients and 10 healthy subjects by inhaling 10 mg of isoproterenol. Bronchial hyperresponsiveness to methacholine and to *Dermatophagoides farinae* in patients with bronchial asthma was investigated by double inhalation method. AIB was induced in both asthmatic and healthy subjects. In the asthmatic patients, AIB was significantly greater than that in the healthy subjects (P less than 0.05). AIB induced by isoproterenol was significantly greater in the asthmatic patients with a positive skin reaction to the specific allergens than in those with a negative skin reaction. In asthmatic patients, bronchial hyperresponsiveness to methacholine and to *D. farinae* was significantly higher in those with AIB induced by isoproterenol than in those without (P less than 0.05). These results suggest that AIB induced by isoproterenol may play an important role in the development of bronchial asthma and that bronchial hyperresponsiveness to specific allergens may be associated with the development of bronchial asthma.Q: Android DialogFragment how to display progress on non-fragment thread I'm currently testing out the following code (it's basically an example taken from the Android developer site) package com.example.testprogress; import android.os.Bundle; import android.support.v4.app.DialogFragment; 2d92ce491b
