Flicker adenoviral vectors (Ad) expressing the secreted form of the human glial cell line-derived neurotrophic factor (GDNF) were used to study their retinal transgene expression pattern after intravitreal injection. Following intravitreal injection of Ad-GDNF, transgene expression was detected in the photoreceptor and inner retinal layers. GDNF immunoreactivity was observed in both the ON- and OFF-cells of the retina. Using light and electron microscopy, transgene expressing cells were localized in the inner nuclear layer (INL), inner plexiform layer (IPL), outer plexiform layer (OPL), and ON-bipolar cell layer. Double immunohistochemistry showed that Ad-GDNF-expressing cells colocalized with the photoreceptor marker protein recoverin (specifically in the cone outer segments) and the postsynaptic protein synaptophysin. Ad-GDNF-mediated transgene expression was restricted to the ON-cells of the retina. Furthermore, only ON-ganglion cells were observed to express the transgene after Ad-GDNF treatment.The Prince (novel) The Prince: A Tale of Revolution in one of the Dismal Towns in the King's Dominions is a novel by the British writer William Makepeace Thackeray. It was published in 1841, one year after his novel Vanity Fair and makes extensive use of the background information which he had gathered in 1838 while traveling in France and Spain, from which he returned to England in 1839. In addition, several other works were published during the next two years: Old St. Paul's, All the Year Round, the Life of Charlotte Bronte, The Luck of Barry Lyndon, and two works of lighter fiction: The Story of Two Furminis, and The Vicar of Bray. Plot The book tells the story of a young Prince de Parabère, who is travelling in the town of Passy in the country of France in the year 1820. A revolution has taken place in the country, and the young Prince is travelling
