2011 BMW TIS 02-2009 Multilingual BMW Tools Pack 2012 Cummins Apps Pack 2012 Cambridge Car Diagnostic 2010 BMW X 3.0 Turbo 2010 Multilingual BMW TIS 02-2009 Multilingual Q: What is the most elegant solution to round a double to 5 digits with an optional decimal point? My double is about 5.5, and I want it to be formatted like 5.50. I can use `String.format`, but I'm wondering if there's a more "elegant" solution, especially if I want to use a rounding mode other than half up. A: Using

Math.round() is the most efficient way, but it may not be "elegant". If you need to format the double you can use a DecimalFormat and then use Math.round().

```
double d = 5.5; DecimalFormat df = new DecimalFormat("0.00"); df.format(d); // returns 5.5 Math.round(d); // returns 5.5
```

A: You could use BigDecimal, but a more straightforward way would be

```
double d = 5.5; String number = Double.toString(d); number = number.replace(".", ","); number = number.replace("e", "."); number = number.replace(",", "."); number = number.replace(".", ""); System.out.println(number);
```

EDIT: The solution above will work for numbers up to 1000, so you might want to add code that deals with numbers > 1000.

Q: How to use the android Callback I want

to use the android HttpClient to get a few things. But I am stuck on the second parameter, how to use the callback here I know the answer is to use the doInBackground method. But I do not understand what the second parameter is. What I have is in my code: private class Download
