Q: How to create byte array from Bitmap image android I need to create a byte array that should store some image information like height, width, color and some other information. I have an image file. I have already converted it into a bitmap. I have created a byte array but the result is not correct. The image is saved into android external storage memory. I get the

image and create a bitmap like this:

```
FileInputStream fis = openFileInput  
    t("/sdcard/Gallery/1.jpg");  
BitmapFactory.Options bmOptions  
    = new BitmapFactory.Options();  
    bmOptions.inSampleSize = 4;  
bmOptions.inTempStorage= new  
    byte[8*1024]; 2d92ce491b
