### Combining two different data

sources into one with multiple joins

I've been trying to combine two

different data sources into one for a

long time but couldn't find the way

to do it. So, I have two tables that I

need to join t1:

```
|----+-----+-----+ | id |
data | |----+-----+-----+ |
1 | 123 | 2,123,56,45 | | 2 | 456 |
5,567,8,8 |
```

|----+-----+-----+ t2:

```
|----+-----+-----+ | id |
data | |----+-----+-----+ |
1 | 234 | 3,98765,43,98 | | 2 | 789 |
```

---

7,84987,65,98 || 3 | 789 |

3,78987,89,98 |

|-----+-----+-----+ result:

|-----+-----+-----+ || t1\_id

| t2\_id | |-----+-----+-----+

| 1 | 123 | 2,123,56,45 || 2 | 456 |

5,567,8,8 |

|-----+-----+-----+ Is there

a way to do that? A: SELECT t1.id,

t1.data t2.data FROM t1 INNER

JOIN t2 ON t1.data LIKE

CONCAT(',', t2.data, '%');

This should work for your case, if not,

please post the db structure and

desired result. Identification of

apolipoprotein E isozymes with
