A: so the way to go would be to download dosens of ssqs for each version of solidworks you want to activate and run each in your command prompt with the following command for example: cscript ssq.vbs /s/sw2013/130 /s/sw2010/130 /s/sw2007/130 /s/sw2006/130 /s/sw2003/130 then move those ssqs to a folder that you can include in your next batch/cmdprompt/command-prompt script. Q: Class file for java.io.ObjectInputStream.read_field_element() I am trying to understand how java serialization is carried out. I understand java serialization uses a number of classes to allow a class to be serialized. I have looked through the source code to do this for java.io.ObjectInputStream.readFields() and found that the class is defined in java.io.ObjectInputStream.class. Could someone please direct me to where I can find the class that contains the methods corresponding to java.io.ObjectInputStream.read_field_element(). A: If you look at the source for java.io.ObjectInputStream, you'll find that most of the methods that are found in the interface are actually static, and they return a byte-array. So, you can just write a simple class, extend java.io.ObjectInput e24f408de9
