Oct 8, 2010 . MDK-ARM from ARM Technologies enables cost-effective and complete ARM software development for embedded ARM-based systems. .[Acute diverticulitis of the cecum. Diagnosis and treatment]. Diverticular disease of the cecum is an uncommon entity and acute episodes are particularly rare. Diagnosis is established by a combination of clinical, radiological and endoscopic findings. There is no consensus on the best therapeutic approach and surgery is often considered too hazardous. This paper reports on a case of acute diverticulitis of the cecum in an 80-year-old female presenting with a painful tender abdomen and fever. Investigations revealed left sided acute diverticulitis of the cecum. Emergency laparotomy revealed an inflamed diverticulum with inflammatory changes of adjacent mesentery and resection of the diseased cecal segment with primary ileocolonic anastomosis. In view of the high morbidity and mortality of untreated diverticulitis, as well as the potential risks of emergency operation in old patients with possible serious co-morbidity, conservative management should be considered. This is justified by the relative infrequency of disease and the possibility of surgical resection in a significant proportion of patients. Emergency! We now have out of control weather as a result of the Antarctic Vortex. This massive weather event has many unexpected results which, in turn, have affected the stability of the Earth's core. Good news! You do not have to fear - the fictional powers that be have done everything possible to insure that everyone is safe. There will be no earthquakes, volcanoes, tsunamis, or hurricanes. The poor pre-mission travelers will be placed on back-ups, and will be instantly extracted to the next available available humanoid host. However, you should not relax. You should be constantly watching the skies! Because an extremely angry and unpredictable sky would not be a very pleasant place to be! You should also be constantly watching the skies because a fleet of massive space ships have arrived to launch a military strike against the dark forces that are brewing up trouble. Once they have destroyed their immediate targets, they will be prepared to launch a full scale attack on the Dark Lord's forces. A quick solar flare could soon eliminate them all. Mammalian cells cultured in vitro can be routinely subpassaged by reseeding in media containing low concentration of fetal bovine serum (FBS). However, such sub 82138339de
