Why we're moving onto a blockchain-based image sharing platform - tbarbugli ====== tbarbugli [onto...](blockchain-based-image-sharing-platform-4ea136327) This invention relates to food products and, more particularly, to a fat substitute and method of its preparation. A major problem encountered with some fat substitute products is the development of an undesirable thickening. This is especially the case when the substitute is used in a food process that requires the use of thickeners. While such products are sometimes used solely as low fat products (e.g. margarine), the use of such products in highly acceptable fat based foods, such as bakery goods (e.g. cookies) or dairy products (e.g. ice cream) places stringent requirements on the various properties of the fat substitute. Another problem encountered with many fat substitutes is the development of an undesirable color. For example, the color of commercially available margarine often varies considerably depending on the time at which the margarine is exposed to the light. One substitute which has some of the desirable properties of the fat, i.e., moisture content, and aroma is described in U.S. Pat. No. 4,387,203. This product, however, is unsatisfactory due to its relatively high carbohydrate content and limited flavor stability. Thus, there is still a need for a substitute which is acceptable to consumers and which has a long shelf life. It is therefore an object of the invention to provide a low fat food product having acceptable organoleptic properties, a high moisture content and long shelf life. Another object of the invention is to provide a low fat food product which, when produced from the same ingredients used to produce conventional fat based food products, does not result in the undesirable thickening or color development.Q: regex for alternating digit sequences I'd like to find a regex to match digits with alternating number sequences, such as: 0...9 (
