Get it from: Contents Previous version Previous versions of NetworkChat Versions of TAP Compatibility list NetworkChat's version history: (This table only shows what revisions we are testing:) Revision Date Version Changes since last release ----- 6.7.1 (00.24.11) 6.7.1 (00.24.11) 4 Bug fixes: \* Online chat bug fixed \* Corrected ipv6 packet-loss-recovery bugs \* IPv6 packet-loss-recovery bug b7e8fdf5c8

NetworkChat allows you to chat with other users on your local network. All a user needs is a working Internet connection and network connection to the chat service of choice. NetworkChat will then allow you to chat, either by sending and receiving private messages or by chatting in a room. There are also additional chat features such as joining and leaving chat rooms, as well as the ability to view the log of chat messages. NetworkChat Features NetworkChat has the following chat features: -Chat rooms -Chat messages -Invisibility -Additional items Chat Rooms NetworkChat automatically creates the room name that you put into the chat program and adds it to the conversation log. You can create as many rooms as you like to chat in or to host a room for which you won't receive private messages. Chat Messages NetworkChat provides an easy way to send and receive text messages. Private messages are automatically stored in your chat log. Invisibility NetworkChat allows you to be invisible. The user in question sees your last message and can copy that to their log of messages, but they will not see your username. You can choose to be invisible with a simple click. Additional Items NetworkChat has a variety of other items such as speed limiters, time limiters, and a who's online feature. SpeedLimiter The speed limit feature allows you to limit the speed of a certain type of message in NetworkChat such as voice messages, speed hookups, and costumer messages. TimeLimit NetworkChat gives you the option to limit the length of any message, voice, or text, to a certain amount of time. Who'sOnline NetworkChat will display a list of users online at any given time. Hide Special Characters NetworkChat has a special character that allows you to hide a certain type of character from your message. Virus Status The user has this option if you want to know if the user has a virus. EventPaste Paste the event code from the list into NetworkChat and then network a user to be notified via email. Room Only Show a room to see who's online and available. Custom Tabs This option allows you to set custom tabs for the user. Enable And Disable Tabs This option will enable and disable custom tabs that have been set by the user. Default To Room All Set a default to room with each user. Min/Max Chatroom Min/Max Chatroom allows you to set a minimum number of

#### What's New In?

Network Chat is a chat daemon that ensures that users are always ready to chat when you need them. The program is open source and is written in C++. Network Chat Key Features: \* Easy to use: Create, Join and start chats with just a few clicks of the mouse. \* No server: Network Chat can be used in a remote server. You can connect to one or more servers at once. \* No dependencies: Network Chat does not require any additional software on the computer it is installed on. \* Server connection free: There is no need to contact the server before starting or joining a chat. \* Freeware: Network Chat is completely free to download and use. \* Saves bandwidth: Network Chat uses two channels in every chat: one for receiving and one for sending messages. All the information sent through the "Receive" channel is not stored on your computer and is not sent to the chat server. This feature minimizes the amount of data you send through the Internet, therefore, saving bandwidth. \* Compatible with all operating systems: Network Chat can be used in all major operating systems. \* Works on all Windows platforms: The program runs on Windows 2000/XP/Vista/7 \* Perfect for all networks: Network Chat allows you to join any network, regardless of whether it is a cable or DSL network. \* Familiar interface: Like all XChat clients, Network Chat uses an intuitive user interface. Its GUI is easy to use and will save you a lot of time. \* Mac compatible: The program can be used on Mac platforms as well. \* Learn more: To learn more about Network Chat, see the article "How to get started with Network Chat." \* See an example: The screenshot below represents a screenshot of the program on Windows Vista. For details on how to connect to a network in Network Chat, read this article. There are many benefits to using NetworkChat instead of other popular chat programs, such as ICQ, MSN, Yahoo! Messenger, AOL Instant Messenger, or any other chat program, including the fact that Network

---

Chat is free. When you want to get your chat daemon running, take the following steps: Step 1: Install Network Chat. Download the executable file (MSI and ZIP, 32 and 64 bit versions) from the "How to get started with NetworkChat" section below or click on this link: [Network Chat](#). The following instructions apply to both the 32
