It is easy to use, easy to integrate, and can analyze data in the following general categories: - Import data from a variety of sources - Transform the data into a model that is easier to use - Discover, understand, and analyze data But you may have questions around the various data analysis capabilities that Spark has to offer. For example: - How can I deal with large volumes of data? - What data sources are available? - How do I make Spark work with existing data? You can access the full capabilities of Spark through the **Keras Data Science API**. With the API, you can call **Pandas** data manipulations from your Spark job and then you can analyze the resulting data in Spark. There are two ways to integrate Spark and Pandas. - `SparkSession.sparkContext.parallelize()`: You can convert the Pandas data frame to a `RDD` and then convert it to a DataFrame with `DataFrame.fromPandas()`. - `pandas.to_sql()`: You can pass a SQL query to `DataFrame.toPandas()` and then use Spark SQL. In the remainder of this lab, you'll work through an example dataset and learn how to manipulate that data. # Lab Instructions You'll use Pandas and Spark 648931e174
