Morphological and functional characterization of a new rat mast cell line, Nb2. A rat mast cell line, Nb2, was derived from the peritoneal cavity of rats by in vitro culture with PWM/IL-3 or PWM/IL-4. Characteristic features of Nb2 cells included: (a) secretion of large amounts of histamine, and the characteristic spectral properties of mast cell granules; (b) presence of alpha-naphthyl-aspartate esterase (alpha-NAE) and beta-hexosaminidase; (c) production of a number of non-specific proteases; (d) fibronectin production; (e) ability to bind IgE. Like mast cells in intact animals, Nb2 cells responded to IgE-dependent antigen and to IgE-independent antigen (N-formyl-methionyl-leucyl-phenylalanine) by degranulation. Upon culture without specific Ag, Nb2 cells degranulated under certain conditions; e.g. culture in the presence of indomethacin for 24 h or transfer to calcium-free medium for 5 min. Thus the Nb2 cell line is a suitable model for study of IgE-dependent and IgE-independent mast cell degranulation.(Also the FYI. Edited for Amiga) Ben My experience goes back several years with Symantec AntiVirus 10.6 which was almost the v. final 10.x version and which, despite bugs, was the easiest version for a newbie to get to grips with due to its intuitive graphical interface and easy to understand explanations. Anyhow, while Symantec's documentation continues to grow all the time their support has gone missing in action. I've spoken to a few people who don't know what to do if they have a problem with an antimalware program. I had a few problems but they were resolved very promptly indeed as soon as I made contact with Symantec. It's nice to feel that you have a support number that is always ready and able to help. Anyway, I'm planning to go back to 20.7 on my next laptop. As to the fact that there may or may not be a problem with 20.7 I have heard mutterings in the background. So far as I'm concerned that's pretty much the only

reason to go for 20
